

Vectron C100

Customer display

The Vectron C100 has a screen diagonal of 26.4 cm (10.4"). It can display the receipt, logos and advertising images and is easily controlled via the POS system. Advertising images can run as slide show, either on full screen when for example the display is not required for registration or you can partition the display. In this case the slide show runs on a part of the display while the other part shows the current bookings. Ten different layouts are available. Furthermore you can program what is to be shown when the screen saver of the POS system is enabled or a customer's purchase is closed with receipt end etc.

The C100 can be mounted directly to the POS systems Vectron POS Mini II, Vectron POS Vario II and Vectron POS Touch and has an adjustable viewing angle. The customer display is alternatively available as stand-alone device with foot.
