TAILOR-MADE

The flexible POS software is freely configurable. This ensures that it is as suitable for the trade industry as it is for service providers, bakeries and hospitality enterprises.

SPECIAL SOFTWARE

The high-performance, technologically advanced POS system software speeds up and simplifies work processes and can be flexibly adapted to your individual requirements.

COMPLETE SOLUTION

Numerous tried and tested interfaces for back office connection options. Printers, scanners, card terminals, dispensing systems, etc. are also supported.

Leading in POS Technology
More than 185,000 installed systems worldwide

URNS PC & TABLET INTO A POS SYSTEM

POS PC is the PC and Tablet version of the powerful, network-capable Vectron POS software. The ability for the system to accept software updates in the event of changes to the law such as e.g. new fiscal requirements or the obligation to label allergens also provides further security for the future. Special functions for bakeries and the catering industry optimize work routines.

COMPREHENSIVE REPORTING

Detailed data storage - who bought what, where, when and at which price - provides the basis for comprehensive reporting. In addition to typical report types like PLU-, department-, transaction- and operator reports, informative additional reports like "first/last PLU sale" provide for an optimised product offer.

EXCELLENT SERVICE

Vectron products are exclusively distributed via a close-knit network of qualified specialist trade partners. This guarantees the

provision of expert advice, individual solutions and reliable 24/7 service provision on-site or via our hotline. Remote maintenance options round off the range of services. Every minute the POS system is broken down ultimately costs money!

CLEVER ADDITIONAL FUNCTIONS

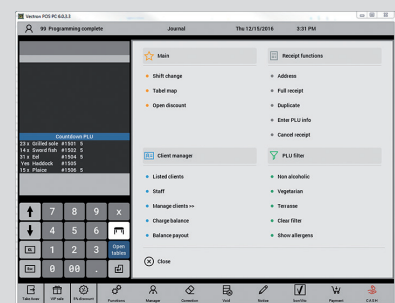

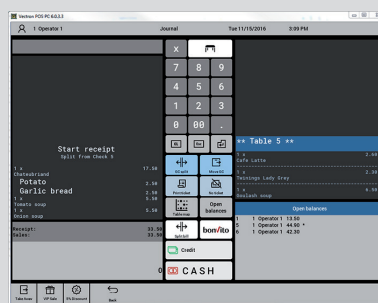

The online marketing tool bonVito enhances Vectron POS systems to include customer loyalty, reservation or reporting functions. By fully integrating it into the POS system, it brings information from both systems together - ideal for setting up a valuable customer list or for evaluation purposes.

bonVito offers among others features such as customer, payment and gift cards, digital stamps and innovative bonus systems. You can directly manage your own individual campaigns via the POS system - securely and without the need for any additional work.

BRIEF & CONCISE OVERVIEW

- Mixed network of PC-based systems and proprietary Vectron POS systems possible
- Individually designable user interface
- Practical functions: time-controlled price changes, registration of returns and inventories, info texts and many more
